SUSPA at Interzum 2019:

Flexible modular system for sit/stand work places

At the Interzum 2019 from 21st until 24th May in Cologne, SUSPA will present a flexible modular system for sit/stand work places, with which you can design different office table solutions. Thus, the company from Altdorf emphasizes significance of flexibility and ergonomics for the modern working environment.

Today's working environment features dynamic processes, flexible working models and continuous changes. With the office solutions from SUSPA, where flexibility and ergonomics play an important role, our systems integrate into this environment easily. At this year's Interzum at the SUSPA booth G010-H011, hall 5.2 the visitor can get a good insight in the variation possibilities of the SUSPA sit/stand work places. From the flexible modular components range, four different table underframes can be built according to space and individual needs: FixFrame, VariFrame, TeamFrame and BigFrame.

FixFrame as well as VariFrame are available for desk tops sized 1,200 to 2,000 mm. The FixFrame consists of a fixed traverse, whereas the VariFrame can be adapted individually thanks to telescopic traverses. A real space saver is the TeamFrame for dual working places. The two table underframes are combined with two bridge elements while the resting table tops stay independent from each other and thus can be driven separately. Moreover, it is possible to link two or more TeamFrames

together. A solution for a big work place with as much surface as possible is the table underframe BigFrame as 3-leg-solution.

The future office: On its way to the Smart Office

All table underframes can be equipped with "smart office", which enables a connection between working place and smartphone. With an app you can for example change and save height adjustments. Especially "smart" is another function: the app evaluates the user's sitting and standing phases and can remind them after long sitting phases to stand up and move, similar to the established Smart and fitness watches. Moreover, a new battery powered solution enables even more flexibility in design and use of the tables.

More ergonomics by height adjustment systems

Beside the new modular system, at the Interzum, SUSPA will also present the proven ELS3 lifting columns for height adjustment for the office and the booth itself will also be centered entirely on ergonomics. The kitchen isle will be height adjustable as well as the buffet tables which are equipped with the lifting columns VariStand or VariBase.

Another main stay of SUSPA are gas springs used for the furniture industry. For example, they enable effortless opening and damped closing of furniture flaps or for an easy adjustment of relax chairs from sitting to lying position. Beside the adjustment systems you can also see gas springs in different variations at the booth.
